

## Common Polyatomic Ions

-1 charge	
$\text{OH}^-$	Hydroxide
$\text{CN}^-$	Cyanide
$\text{NO}_3^-$	Nitrate
$\text{NO}_2^-$	Nitrite
$\text{ClO}_3^-$	Chlorate
$\text{FO}_3^-$	Fluorate
$\text{BrO}_3^-$	Bromate
$\text{IO}_3^-$	Iodate
$\text{CH}_3\text{CO}_2^-$ or $\text{C}_2\text{H}_3\text{O}_2^-$	Acetate
$\text{H}_2\text{PO}_4^-$	Dihydrogen phosphate
$\text{HCO}_3^-$	Hydrogen carbonate
$\text{HSO}_4^-$	Hydrogen sulfate
$\text{HSO}_3^-$	Hydrogen sulfite
$\text{MnO}_4^-$	Permanganate
-2 charge	
$\text{SO}_4^{2-}$	Sulfate
$\text{SO}_3^{2-}$	Sulfite
$\text{CO}_3^{2-}$	Carbonate
$\text{HPO}_4^{2-}$	Hydrogen phosphate
$\text{CrO}_4^{2-}$	Chromate
$\text{Cr}_2\text{O}_7^{2-}$	Dichromate
-3 charge	
$\text{PO}_4^{3-}$	Phosphate
+1 charge	
$\text{NH}_4^+$	ammonium

### Examples of polyatomic compounds:

$\text{NaNO}_3$  sodium nitrate

$\text{Ca}(\text{NO}_2)_2$  calcium nitrite NOTE: because Ca is +2 and  $\text{NO}_2$  is -1, we need 2 nitrites which are placed in brackets

$\text{K}_2\text{SO}_4$  potassium sulfate

$\text{Cu}(\text{OH})_2$  copper (II) hydroxide

$\text{NH}_4\text{Br}$  ammonium bromide

## Common Acids

Binary Acids (hydrogen and a non-metal): all begin with the prefix: <i>hydro</i>	
$\text{HCl}_{(\text{aq})}$	Hydrochloric acid
$\text{HF}_{(\text{aq})}$	Hydrofluoric acid
$\text{HBr}_{(\text{aq})}$	Hydrobromic acid
$\text{HI}_{(\text{aq})}$	Hydroiodic acid
$\text{HCN}_{(\text{aq})}$	Hydrocyanic acid
$\text{H}_2\text{S}_{(\text{aq})}$	Hydrosulfuric acid
Oxyacids (hydrogen and a polyatomic ion): none begin with the prefix <i>hydro</i>	
$\text{HNO}_{3(\text{aq})}$	Nitric acid
$\text{HNO}_{2(\text{aq})}$	Nitrous acid
$\text{H}_2\text{CO}_{3(\text{aq})}$	Carbonic acid
$\text{H}_2\text{SO}_{4(\text{aq})}$	Sulfuric acid
$\text{H}_2\text{SO}_{3(\text{aq})}$	Sulfurous acid
$\text{H}_3\text{PO}_{4(\text{aq})}$	Phosphoric acid
$\text{HClO}_{3(\text{aq})}$	Chloric acid
$\text{HFO}_{3(\text{aq})}$	Fluoric acid
$\text{HBrO}_{3(\text{aq})}$	Bromic acid
$\text{HIO}_{3(\text{aq})}$	Iodic acid

NOTE: all acids contain hydrogen. Only the binary acids begin with *hydro* in the name; oxyacids omit the *hydro* to distinguish them from binary acids. All acids are dissolved in water therefore the subscript (aq) is always included; aq is the short form for *aqueous* which means *dissolved in water*.
